

Please substitute the Abstract, with the following replacement Abstract:

ABSTRACT

Disclosed is a method for addressing a display pixel and an electrical circuit arrangement for the display device. In some embodiments, the electrical circuit arrangement includes an input terminal for receiving a first signal; a first memory element for storing information about the first signal; a driver element coupled to the first memory element for outputting a second signal via an output terminal in accordance with the information about the first signal; and a calibration circuit coupled between the driver element and the input terminal for matching a potential difference between the driver element and the input terminal during a calibration phase prior to receiving the first signal.
